AHEAD Update - January 2009
Animal Health for the Environment And Development

Dear AHEAD Colleagues:

I should again note that if you wish to be removed from this e-mail list please just let me know. My hope is to keep parties interested in Animal Health for the Environment And Development up-to-date on relevant developments, but I certainly understand if anyone wants to opt out of receiving such messages. Updates are also posted (and archived) on the AHEAD website at www.ahead.org.za, which also features a new AHEAD Update 'sign-up' feature on the home page. Please note that URL, not for many of the organizations mentioned below can be found at <http://www.ahead.org.za/links.htm>.

If you would like to post an item in the next AHEAD Update, please just send it to me - thank! And here's to 2009 treating you and your programs well!

MINI-TORIAL

At a time characterized by pervasive economic as well as ecologic uncertainty, it may seem difficult to stay focused on the important work many of us are doing. But more vulnerable than ever in terms of potentially using the limited traction we've managed to obtain with world leaders, and with society at large. But of course in times like these, our collective efforts are more pressing than ever. The necessary linked challenges facing sustainable development, poverty alleviation, food security, health, and environmental conservation require more attention now than they did even 6 months ago. We must continue to work together to find the resources to accomplish the work we all know must be done, on a set of issues that we know persist in times of economic boom as well as crisis, but are admittedly exacerbated when markets and governments stumble. In the issue of the AHEAD Update, I report on some remarkable funding commitments by the Gates Foundation, the UK Department for International Development (DFID), and Google.org to institutions and efforts that I believe are very relevant to our collective long-term goals (see RELEVANT FUNDING SUCCESSSES below). In short, even now, there is some surprisingly good news that I believe has been catalyzed by our proximity to an encouraging and exciting societal 'tipping point' toward 'One Health' thinking.
